EDUCATION

University of Idaho

Moscow, ID

B.A. Applied Mathematics & Data Science, GPA: 3.66/4.0 – Dean's List (current semester) Aug 2024 – May 2028

- Relevant Coursework: Statistics, Data Analysis, Machine Learning, Deep learning, Applied AI Engineering

RELEVANT EXPERIENCE

Lead TA / Data Analyst

May 2026 – Present

Soil Stewards Student Farm, University of Idaho

- Lead data analysis for farm operations using Python and SQL, including creating, altering, and cleaning tables and removing duplicate records to keep production data reliable
- Build working summary tables and assign field tasks via Excel, and estimate monthly revenue using pandas while tracking sales and attendance records
- Create crop-plantation curves with Matplotlib to plan planting and forecast costs, contributing to a 15% reduction in unexpected seasonal expenditures

Undergraduate Researcher

Jan 2025 – Present

College of Natural Resources, University of Idaho

- Building a Python-based automation pipeline to estimate tree stem diameter and taper from LIDAR point cloud data, advised by Director Ripley Bruce and Professors Mark Kimsey and Edward Flathers
- Validating measurement tables against real-world LIDAR data and writing technical documentation so future students can use and extend the tool

Team Lead

May 2025

Mineral-ML Project (Data Science & Machine Learning)

- Led a student team building a full ML pipeline to predict mineral hardness, density, transparency, crystal system, and industry application using Random Forest and XGBoost
- Directed feature engineering (parsing chemical formulas into weighted elemental properties) and exploratory data analysis, including clustering (K-Means, PCA, t-SNE)
- Designed and built an interactive Streamlit dashboard so non-technical audiences could filter data, view clusters, and run live model predictions

MAC Tutor

Aug 2024 – May 2025

Math Assistance Center, University of Idaho

- Tutored 500+ students in math and statistics, translating technical concepts into plain language for learners with varied backgrounds
- Coordinated tutoring schedules and supported onboarding of new tutors, developing organizational and cross-team communication skills

CORE SKILLS

Programming & Data: Python (Advanced), SQL, R, Tableau, Excel, pandas, Matplotlib, machine learning (Random Forest, XGBoost, PCA)

Tools: Microsoft Office Suite (including Access), Google Workspace, Streamlit

Communication & Collaboration: Translating technical concepts (data pipelines, ML models) into plain language for non-technical audiences; team lead on the Mineral-ML project and Lead TA on the Student Farm team

CERTIFICATIONS & TRAINING

Application of AI engineering – Codepath.org

Networking Basics – CISCO / CCNA Networking Academy

Python Basics – CISCO Networking Academy / OpenEDG Python Institute

Machine Learning & Data Science – Completed coursework and independent project portfolio
